Title : Experimental Use Heavy Oil from Low-Temperature
Tar as Binder in Road Building

Orig Pub: Drogownictwo, 1956, 11, No 10, 242-243

Abstract: Pitch from low-temperature tars (LT) is of greater
plasticity. Addition of LT to road-building tar,
produced by high-temperature processes, retards its
aging, maintains it in a plastic state for a longer
period, enhances its adhesion and stability to
water. Laboratory investigations have shown that

TITLE: Statistical characteristics of functional ratemeters

SOURCE: Atommaya energiya, v. 19, no. 6, 1965, 544-546

TOPIC TAGS: count rate meter, electronic measurement

ABSTRACT: The outlet voltage of a count rate meter will vary due to the statistical nature of the inlet signals. The magnitude of the variation is characterized by the relative statistical error $\delta = \sigma/\bar{U}$, where σ is the average square deviation and \bar{U} is the average voltage. The average value and dispersion of the outlet voltage are determined for the equivalent network of a current rate meter. Values of \bar{U} and σ are tabulated for a linear meter, summing and difference meters, ratio meters, and log meters. Orig. art. has: 1 figure and 1 table. [NA]

Title : The Interest of I.P. Pavlov in Work in the Field of Zootechnical Physiology.

Orig Pub: Vopr. istorii yestestvozn. i tekhniki, 1956, vyp. 2, 269-275

Abstract: A letter of I.P. Pavlov to the chief of the veterinary office of the Ministry of Internal Affairs, V.F. Nagorskiy, that he supported the proposition of Nagorskiy concerning the organization of special laboratories for the research of I.I. Ivanov, who was working out a method of artificial insemination for agricultural animals. Another letter of Pavlov's is published in which he recommended the inclusion of K.I. Krzhyshkovsky for the staff of Ivanov's laboratory.

TITLE: Continuous centralized monitoring of personal radiation doses

SOURCE: Atomnaya energiya, v. 19, no. 2, 1965, 157-161

79

TOPIC TAGS: radiation dosimetry, radiation monitor

ABSTRACT: The present article is an abbreviated version of the report presented in September 1964 to the international conference in Budapest. This conference was attended by the countries belonging to the Council for Mutual Economic Aid. Various possible developments of a centralized system for personal monitoring were discussed and some alternative control methods were reviewed. The use of individual and stationary dosimeters was considered. Possibilities for an automatic processing of personal doses were examined and the use of computers and analyzers were recommended. The use of computing equipment was recommended also for collecting information on personal doses and for calculating cumulative doses. A general electronic computing arrangement

Card 1/2

09010436

L 5073-66

ACC NR: AF5022633

was described and schematically presented. The use of stationary dosimeters for area and room monitoring by means of a remote control equipment is discussed and a formula for the determination of pulse reading errors is given. The fundamental aspects of determining personal doses by means of telemetering devices were reviewed and one of the possible arrangements was illustrated. In conclusion, it is stated that the proposed devices and arrangements can be realized by using existing standard instruments and equipment. Orig. art. has: 1 table and 3 diagrams.

TITLE: Multipoint control of radiation levels

SOURCE: Atomnaya energiya, v. 20, no. 1, 1966, 82-84

TOPIC TAGS: radiation measurement, nuclear safety, automatic control system

ABSTRACT: The tendency toward centralization and automation of control systems extends to the continuous collection of radiation dose data from operating personnel while working. Cathode-ray tubes were found suitable for such centralized collection of radiation safety information. Continuous and simultaneous indication of the radiation levels from several locations, e.g., in the form of vertical lines, the lengths of which are proportional to the dose level, allows a rapid and convenient survey of the situation at any given moment. The system requires suitably placed individual senders, connection systems, and a central control room provided with amplifiers and scanners. A multichannel count-rate device is used, with a linear, rather than logarithmic measuring system. Care was taken to eliminate interaction between channels. The authors thank B. V. Nemirovskiy for useful advice and A. P. Serzhantov for assisting the authors in the working of the multichannel count-rate device. Orig. art. has: 1 figure and 1 formula. [NA]

TITLE: Multichannel pulse counting rate meter. Class 21, No. 187843 [announced by Union Scientific Research Institute for Instrument Manufacture (Soyuznyy nauchno-issledovatel'skiy institut priborostroyeniya)]

SOURCE: Izobreteniya, promyshlennyye obratstv, tovarnyye znaki, no. 21, 1966, 56

TOPIC TAGS: pulse counter, pulse rate, count rate meter

ABSTRACT: This Author Certificate presents a multichannel pulse counting rate meter containing a cathode ray tube, pulse registers, a high-speed electronic switch, and a vertical and horizontal deflection amplifier for the cathode ray tube. To measure counting rate differences varying over a wide range simultaneously in all channels without switching subranges, electronic commutator switches are connected to the outputs of wide-band linear differential counting rate meters, one for each channel (see Fig. 1). The switch outputs are connected through current-setting resistors and isolating capacitors to the input of a collecting stage consisting of a grounded base transistor. The output of the collecting stage is connected to the input of a logarithmic CRT vertical deflection amplifier.

USSR/Medicine - Genetics

"Concerning Heredity in the Diathesis of Pathological Processes," M. E. Skatkov
(Moscow)

Zhur Nevropat i Psikh, Vol 52, No 11, pp 63-65

Answered article by O. V. Kerbikov in Zhur Nevropat i Psikh, Vol 52, No 5.
Discusses appearance of new trend in Soviet med literature in overlooking
heredity as common factor in origin of disease. Defines heredity as "an
effect of the combined influences of outside environments assimilated by the
organism in the course of preceding generations." Concludes that only after
a thorough study of all the peculiarities of an organism, whether inherited
or acquired, can we decipher the nature of numerous diseases and proceed
toward prevention and treatment of the existing condition. Editors note
that this article is presented as an open discussion.
